

Supplemental Figure 3. Somatic size distribution of TG neurons immunoreactive for TRPV1 receptor (filled columns; left). The TRPV1 positive neurons which are also immunoreactive for TrkA are superimposed (as percent of TRPV1 immunoreactive neurons, they amount to $45 \pm 3 \%$, $n = 3$, open columns). Representative microphotograph of neurons labeled with anti-TRPV1 (red) and TrkA (green) is also shown (right). Calibration bar = 50 μm.
